

INTERNAL EFFICACY TEST: FIELD TEST

PRODUCT NAME

MENFORSAN CHAMPÚ ESPUMA ANTI-INSECTOS PARA PERROS Y GATOS (ANTI-INSECT FOAM SHAMPOO FOR DOGS AND CATS)

Dates of the field test: 1st-15th July 2016

FIELD TEST TRIAL:

This test was carried out under the direct control of Mr. Guillermo Picabea García, Veterinary Manager at LABORATORIOS BILPER S.L

Before launching it in the market, the product was tested on 10 DOGS and 10 CATS of different breeds, coats and ages without visible fleas or ticks on their bodies. These dogs and cats lived in different urban and rural areas with risk of ticks and fleas.

TEST OBJECTIVES AND METHODOLOGY:

Determine the repellent and preventive action of **MENFORSAN CHAMPÚ ESPUMA ANTI-INSECTOS PARA PERROS Y GATOS (MENFORSAN ANTI-INSEC FOAM SHAMPOO FOR DOGS AND CATS)** in 20 dogs and cats.

Foam Shampoo was applied on different parts of the body of all the animals that participated in the test (hands, legs and belly).

Dogs and cats of this test were treated with the shampoo leaving the foam to act for 5 minutes before its removal with a clean towel.

The amount of foam used for each part of the body was about 30ml

FIELD TEST RESULTS:

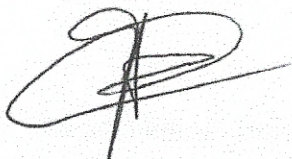

Of the group of 10 dogs and 10 cats that were treated with this foam shampoo on different parts of their bodies, none presented visible insects on their skin after bath and during four days after the treatment therefore the product acted correctly because they prevented the appearance of both fleas and ticks.

CONCLUSIONS:

By signing this document, Mr. Guillermo Picabea García, Veterinary Manager at LABORATORIOS BILPER S.L certifies that by assessing the overall results of the efficacy field test, it can be declared that the product **MENFORSAN PIPETAS ANTI-INSECTOS PARA PERROS (ANTI-INSECT SPOT-ONS FOR DOGS)** has an excellent repellent capacity for the prevention from fleas and ticks and mosquito bites following the recommended dosage guidelines.
