

INTERNAL EFFICACY TEST: FIELD TEST

PRODUCT NAME

MENFORSAN CHAMPÚ ANTI-INSECTOS PARA PERROS (ANTI-INSECT SHAMPOO FOR DOGS)

Dates of the field test: 1st-15th September 2016

FIELD TEST TRIAL:

This test was carried out under the direct control of Mr. Guillermo Picabea García, Veterinary Manager at LABORATORIOS BILPER S.L

Before launching it in the market, the product was tested on 20 DOGS of different breeds, coats and ages (9 half-blood, 2 Yorkshire, 1 Bichon Maltesse, 2 Bulldog, 2 Fox Terrier, 1 Pomeranian and 1 Caniche Toy)

TEST OBJECTIVES AND METHODOLOGY:

Determine the repellent and preventive action of **MENFORSAN CHAMPÚ ANTI-INSECTOS PARA PERROS (MENFORSAN ANTI-INSECT SHAMPOO FOR DOGS)** in 20 dogs of different breeds, sizes and different habitats (rural and urban) with risk of ticks and fleas.

Dogs included in this test were bathed with the shampoo leaving product foam to act five minutes before final rinse.

Shampoo amount used during the process was variable depending on the size, breed and type of coat. 30ml of shampoo was used in small dogs, 50ml in medium size dogs and 75ml in bigger dogs.

FIELD TEST RESULTS:

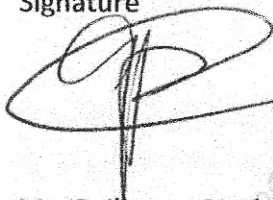

Of the group of 20 dogs that were treated with this shampoo, none presented visible insects on their skin after bath and during four days after the treatment therefore the product acted correctly because they prevented the appearance of both fleas and ticks.

CONCLUSIONS:

By signing this document, Mr. Guillermo Picabea García, Veterinary Manager at LABORATORIOS BILPER S.L certifies that by assessing the overall results of the efficacy field test, it can be declared that the product **MENFORSAN CHAMPÚ REPELENTE PARA GATOS (MENFORSAN REPELLENT SHAMPOO FOR CATS)** has an excellent repellent capacity for the prevention of fleas and ticks and mosquito bites and that the action of this shampoo effectively protected all cats in the study at least during the 96 hours after bathing with said product, following the recommended dosing guidelines.

INTERNAL EFFICACY TEST: FIELD TEST

PRODUCT NAME

MENFORSAN CHAMPÚ ANTI-INSECTOS PARA GATOS (ANTI-INSECT SHAMPOO FOR CATS)

Dates of the field test: 1st-15th August 2016

FIELD TEST TRIAL:

This test was carried out under the direct control of Mr. Guillermo Picabea García, Veterinary Manager at LABORATORIOS BILPER S.L

Before launching it in the market, the product was tested on 20 CATS of different breeds, coats and ages without visible fleas or ticks on their bodies (11 half-blood, 3 Siamese, 4 Persians, 2 shorthair Europeans). These cats lived in different urban and rural areas with risk of fleas and ticks.

TEST OBJECTIVES AND METHODOLOGY:

Determine the repellent and preventive action of **MENFORSAN CHAMPÚ ANTI-INSECTOS PARA GATOS (MENFORSAN ANTI-INSEC SHAMPOO FOR CATS)** in 20 cats of different breeds, sizes and different habitats (rural and urban) with risk of ticks and fleas.

Cats included in this test were bathed with the shampoo leaving product foam to act five minutes before final rinse.

Shampoo amount used during the process was variable depending on the size, breed and type of coat. 30ml of shampoo was used in small cats and 50ml in medium cats.

FIELD TEST RESULTS:

Of the group of 20 cats that were treated with this shampoo, none presented visible insects on their skin after bath and during four days after the treatment therefore the product acted correctly because they prevented the appearance of both fleas and ticks.
